Project 1 Stage 1. Checklist

Project requirements

The requirements that your project must meet are listed below. If any of them aren't met, the automated testing system will leave a comment in your code describing the mistake, and your project will be returned to you. For now, you won't have a limit on the number of attempts you can make, but at the last stage, you can submit your project for review a maximum of four times. Make sure that all the requirements in the checklist are met before submitting.

General

- The project contains:
  - The `index.html` file
  - An `images` directory with all the images
  - A `styles` directory with a `style.css` file stored inside it
  - A `vendor` directory with a `normalize.css` file stored inside it
  - An `.editorconfig` file
  - A `.prettierignore` file, which tells Prettier to ignore `normalize.css`
  - A `README.md` file
- All the tasks provided in the brief are solved correctly:
  - The project doesn't contain extra code, i.e., code that's not required by the brief.
  - Only the parts of the code required by the task have been changed.
  - The color settings for all links, section backgrounds, and fonts are implemented according to the brief.
  - Sections have been ordered following the brief requirements.
  - Classes defined in the brief are named strictly in accordance with it. All classes are named according to BEM.

- There are no typos in the HTML and CSS, and the code is valid. We recommend using the <u>W3C Markup Validator</u> to check your code for validity.

- The code is well-formatted using the Prettier.

General styles and semantics

- There is a `div` element with the `page` class with specified styles and font from the brief.

  - `page` is the top-most parent class of the webpage.

  - The `page` class should be given a minimum and maximum width as specified in the brief.

  - The block should be centered.

  - Font settings (font family, font size, and line height) are specified according to the brief.

- The `<header>`, `<main>`, `<footer>`, `<section>`, and `<nav>` elements are present in the code, and they are used for their intended purposes.

  - `<header>` for `header` class

  - `<nav>` for `nav` class

  - `<main>` for `content` class

  - `<section>` for `staff`, `events`, `membership`, `about` classes

  - `<footer>` for `footer` class

Header

- The navigation bar menu matches the design, and styles are set according to the brief.

  - `nav` block:

    - It should be a flexbox container.

    - Distribute the flexbox items using the `justify-content` property.

  - `nav__links` block:

    - It should be a flexbox container.

- - Center the flexbox items using the `align-items` property.
  - Specify the `column-gap` equal to 20.
- Header text elements are styled correctly.
  - `title` element has `max-width`, `font-size`, `line-height`, `font-weight`, and `margin` are set according to the brief.
  - `description` element has `max-width`, `font-size`, `line-height`, and `margin` are set according to the brief.
